Abstract

The aim of the project “Student-Teacher Dashboard” is to create a structured communication channel between teachers and students. It facilitates various academic and administrative functions, including notice dissemination, access to course materials, and display of marks. This report documents the project’s functionalities, steps of installation and limitations.

Introduction

The student-teacher dashboard is the one-stop solution for all the communication between teacher and student. Using this software, teachers will be able to share study material, manage marks and also publish notices for students.

Methodology

Project Structure

The project is structured into a main Django project named "Student-Teacher dashboard," encompassing two key applications: student and teacher."

- Student Application: Manages student interactions with the platform, including login, notice viewing, access to course materials, and marks review.
- Teacher Application: Handles teacher-related functionalities such as login, posting notices, uploading course materials, and entering student marks.

Implementation

Groups and Permissions

For Students:

1. **Login:** Secure authentication to access personal and course-related information.
2. **Notices:** View notices posted by teachers.
3. **Course Materials:** Access and download course-related materials.
4. **Marks:** View academic marks and feedback.

For Teachers:

1. **Login:** Secure authentication for accessing administrative interfaces.
2. **Post Notices:** Upload notices relevant to students.
3. **Upload Course Materials:** Share educational resources with students.
4. **Enter Marks:** Record and publish student performance metrics.

User Management

- 1) The "Dashboard" project employs a centralized user management system to maintain control ensure secure access prevent any unauthorized access and maintain the integrity of the records.
- 2) There is no signup page, The superuser will create the username and password and give it to students and teachers

Database Design

User Management

- 1) We are using the SQLite database to manage users and groups, which is facilitated through the auth_user and auth_group tables.

Teachers have an option to edit data but students can only view the data

Notices Table:

- 1) id: Primary key.
- 2) title: The title of the notice.
- 3) content: The detailed content of the notice.
- 4) posted_by: Foreign key linking to the auth_user table to identify the teacher.
- 5) created_at: Timestamp indicating when the notice was posted.

Course Material

This includes materials uploaded by teachers, such as chapter names, YouTube URLs, and notes in PDF format.

- 1) CourseMaterial Table:
- 2) id: Primary key.
- 3) chapter_name: The name of the chapter.
- 4) video_url: URL of the corresponding YouTube video.
- 5) pdf_file: FileField to store the uploaded PDF file.
- 6) created_at: Timestamp for when the material was uploaded.

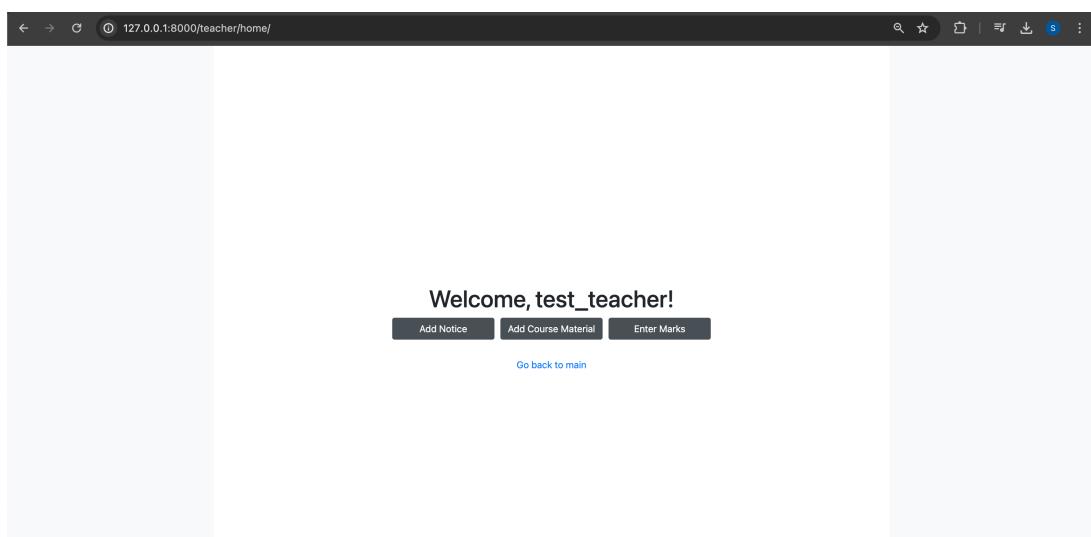

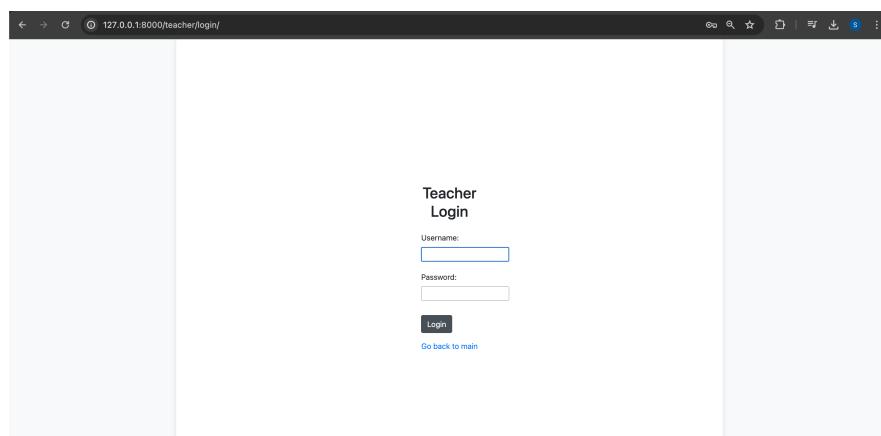

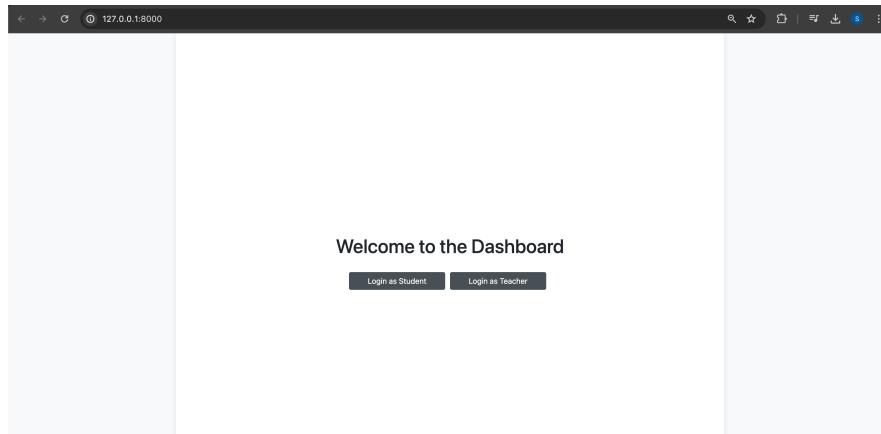

Marks

- 1) Student (Foreign Key)
- 2) Marks Obtained
- 3) Total Marks

To manage migrations and interact with the database, Django provides the following commands:

- `python manage.py makemigrations`: Prepares migrations based on model changes.
- `python manage.py migrate`: Applies migrations to the database, structuring it according to defined models.

The screenshot shows a web browser window with the URL `127.0.0.1:8000/student/login/`. The title bar includes standard browser icons for back, forward, search, and refresh. The main content area is titled "Student Login". It contains two input fields: "Username:" with the value "manali" and "Password:" with the value "*****". Below these is a dark blue "Login" button. At the bottom of the form is a small link "Go back to main".

The screenshot shows a web browser window with the URL `127.0.0.1:8000/student/home/`. The title bar includes standard browser icons. The main content area displays a welcome message "Welcome, manali!" in bold black font. Below the message are four dark blue buttons labeled "Show Notice", "Show Course Materials", "Show Marks", and "Go back to main".

The screenshot shows a web browser window displaying a "Notices" section. The title bar includes standard browser icons. The main content is a table with two columns: "Date" and "Notice". The table rows contain the following data:

Date	Notice
2024-04-03 10:37	Testing Notice after Vs Installation
2024-04-02 19:53	I will upload lecture 3 soon
2024-04-02 19:51	I have uploaded 2 lectures
2024-04-02 19:51	This is just an introduction Message

At the bottom of the notices section is a link "Back to Home".

Conclusion

The "Dashboard" project represents a significant step forward in simplifying the formal communication between teachers and students.

By leveraging the power of Django we are able to create a user friendly platform to share study material, notices and displaying maths

Future Directions

- 1) **Feature Expansion:** More features can be added to this project like daily attendance and a way for students to submit their assignments
- 2) **Use Media- Query** to make give better user experience of mobiles
